

Foaming cleanser
helps unclog pores

Sebum is great for retaining moisture in the skin, however, if this becomes excessive the skin can become 'oily' and more prone to skin problems such as acne. The over production of sebum or oil often leaves the skin looking shiny and greasy rather than healthy and vibrant.

Many over the counter products formulated to help with oily skin don't contain the right ingredients to penetrate deep enough to help address the problem.

CLENZIderm M.D.® Daily Care Foaming Cleanser

is suitable for normal to oily skin, to help unclog pores and wash away dead skin and impurities. With additional cooling menthol, your skin is left feeling refreshed after each use.
