COMING SOON

## 360 Light Technology

Helping your client visualize their skin concerns is a great way to advise them the best treatments. Whether you want to highlight wrinkles, fine lines or volume loss, the Observ is the skin analysis device that can help you do so.

With the new 360 Light Technology we bring you a better way to show the effects of volume treatments with high quality before and after pictures. The easy to control dynamic wheel will give you full control over your point of light so you can use shadows to show where on your clients skin, treatments may be most effective.

The comparison mode that already was a great functionality within the Observ 520x is now even better suited for showing the changes that have been achieved with a treatment. Show the before and after pictures side by side and scroll over them to showcase the way the volume has been changed. This way, your client satisfaction will be much higher as the results are finally made visible in detail.

Our Sales representatives can tell you all about this new technology. Don't hesitate to contact them for more information!
