

Standard kit contains:

NOTE: Templates and Magnetic Graphics for compact unit will ship in a separate box.

Extra components shipped ONLY with Small Unit:

NOTE: Magnetic Graphic for small unit is included, templates will ship in a separate box.

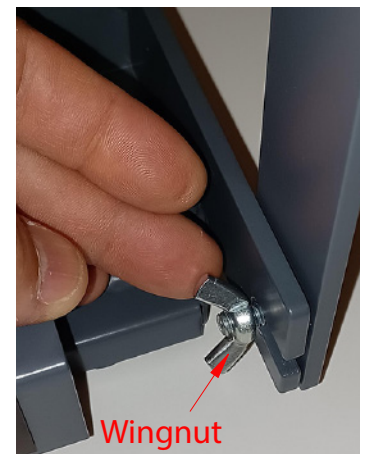

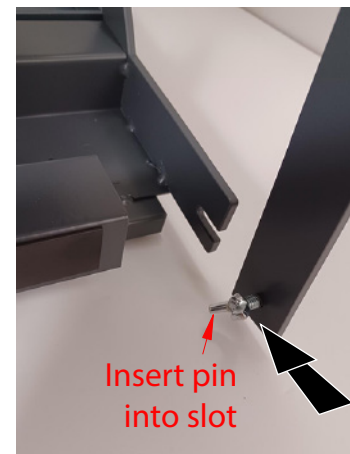

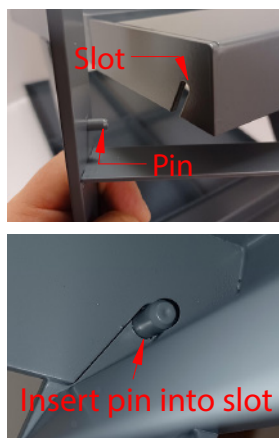

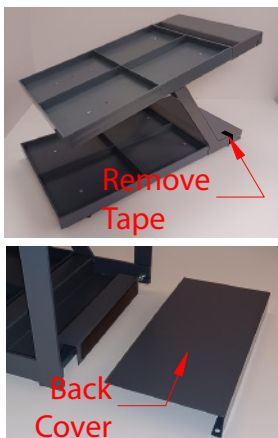

Scan for a display assembly video tutorial and digital planograms with setup instructions:

The following instructions can be applied to assemble and set up all sizes of the displays.

1- Remove all packing material from enclosed components. Place base on top of a flat surface. Remove tape holding back cover to the base, then remove back cover by pulling towards you. Ensure header frame is facing forward, then align pins with slots on both sides, and lift header frame upwards to insert pins into slots. **NOTE: Back side of header has a solid metal strip running across and the front has a magnetic strip.**

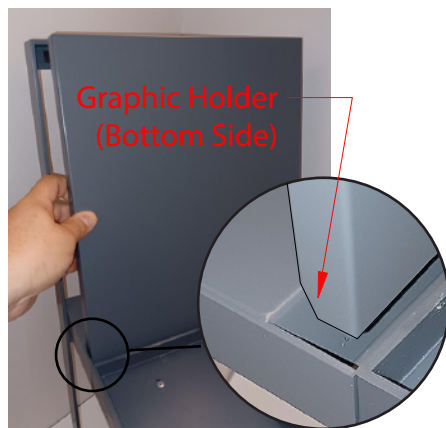

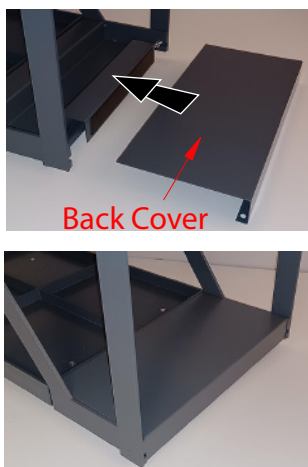

2- Once pins are inserted into the slots, push the bottom of the header frame forward, and insert screws at the bottom of the header frame into the slots located at the bottom of the base. Secure header frame with enclosed wingnuts.

3- Once header frame is secured in place, slide back cover back in place as shown.

4- Insert graphic holder into the well towards the back of the tray. Insert top of graphic holder into the header frame. **Note that top of the graphic holder is closed, and bottom is open.** (Attach magnetic graphic if it is included with the kit).

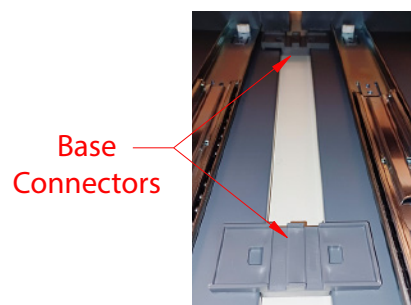

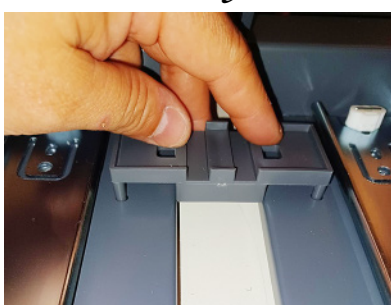

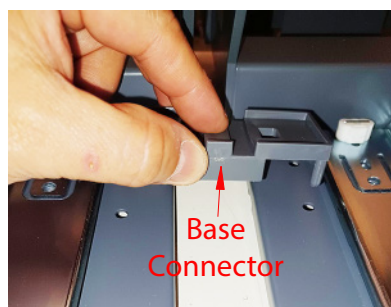

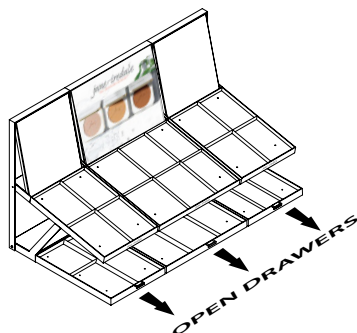

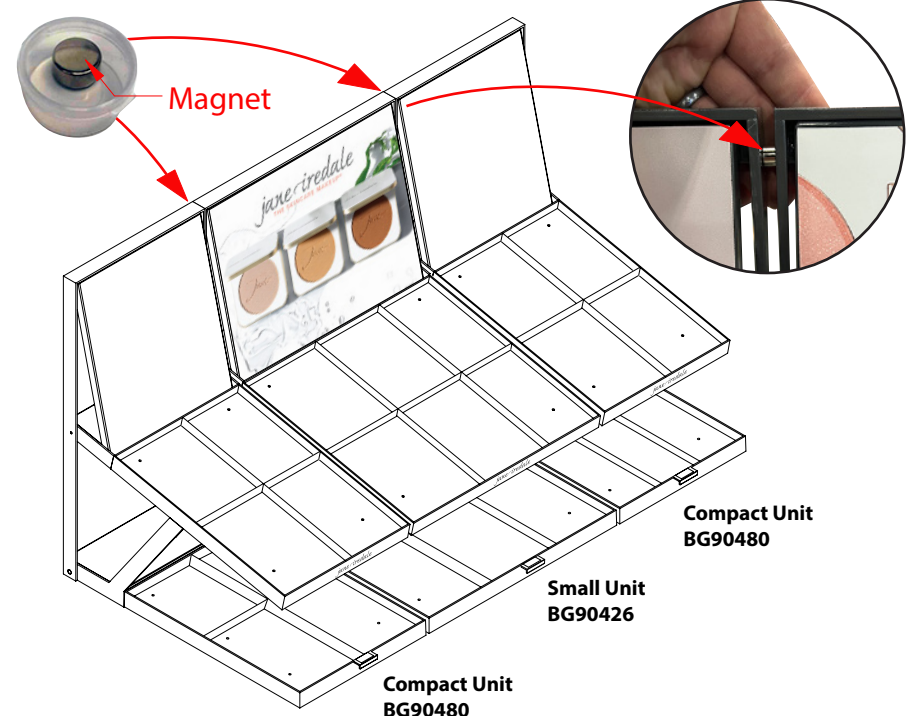

5- After assembling all units, place units in the designated area. **Note that units can be configured in multiple ways.**

6- Pull drawers out on all units you are connecting and insert the base connectors between the units. Connectors fit into the holes located next to the drawer slide. There are two connectors that help keep the units locked together and aligned, one in the front and one in the back. **Move units left to right and front to back as necessary, to align the holes before inserting the connector all the way. Close drawers when completed.**

7- Remove magnets from plastic container and place each magnet slightly below the top of the header frame between each unit. This will keep the header frames aligned and spaced equally.

Magnet Placement

Cleaning Instructions:

Clean with a soft dry cloth, or dampen with warm soapy water if needed. Do not use cleaners that contain alcohol or acetone (nail polish remover).

8- Follow planogram layout below for proper set up of a Full Line Display. NOTE: Not all templates/assortments may be available in all markets.
