

# Q+

## Common Questions

### What is unique about the ULTRAcel Q+?

ULTRAcel Q+ is a safe, state-of-the-art, non-invasive treatment for lifting and tightening areas of the face and body using High Intensity Focused Ultrasound (HIFU). New technology, exclusive to ULTRAcel Q+, can also target fat tissue, allowing the treatment to be used to contour specific areas.

Unlike other HIFU treatments, the ULTRAcel Q+ is almost 3 times faster, resulting in minimal discomfort and quicker treatment time.

### How long does a treatment take?

The length of the treatment will depend on the area being treated and your individual treatment plan. A face and neck treatment takes between 8-10 minutes, while a partial body treatment takes approximately 15-30 minutes.

### What does the treatment feel like?

As the HIFU is delivered, you will feel small amounts of energy travelling down into the skin. This indicates that the collagen-building process has started. Minimal discomfort may vary from person-to-person, but the sensation will only last as long as the energy is being delivered. No anaesthetic is required for an ULTRAcel Q+ treatment.

### Will I need to take time off to recover?

After an ULTRAcel Q+ treatment, you can resume your day-to-day activities immediately with zero recovery time.

### When will I see results and how long will they last?

For facial treatments, you may notice your skin is smoother and tighter immediately after the treatment, however the full result will take place over the following 6 months as new collagen is produced. For fat reduction treatments, you may notice an immediate contouring effect, but the full effects will continue to improve over the following 6 months. As skin continues to age, further treatments can help to slow down the natural ageing process.

# Why have ULTRAcel Q+

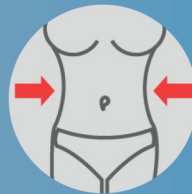

## Rejuvenation

Stimulate the growth of new collagen to restore a more youthful, natural appearance.

## Facial Contouring

Create defined and contoured features including cheeks, jaw, chin and temple.

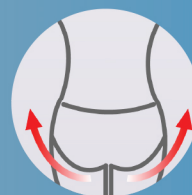

## Body Contouring

Achieve a more toned and sculpted body shape by eliminating stubborn pockets of fat.

## Lift & Tighten the Face

Target specific areas of concern such as jowls, neck, nasolabial folds and double chin, whilst reducing wrinkles.

## Lifting & Tighten the Body

Target specific areas of concern such as abdomen fat, arms, thighs and under the buttocks.

# Our Technology

ULTRAcel Q+ uses High Intensity Focused Ultrasound (HIFU) to target different layers of the skin including the SMAS (Superficial muscular aponeurotic system) and the dermis.

The SMAS is the same area typically addressed in a surgical face-lift. Targeting the dermis stimulates the growth of fresh, new collagen, to lift and tighten the skin, with no skin surface damage. The wide range of cartridges available for the ULTRAcel Q+ makes the treatment fully customisable, for all patient concerns.

Brand new linear-shot technology allows the ULTRAcel Q+ to target fat tissue, meaning that the treatment can be used to contour face and body areas. This technology also allows the ULTRAcel Q+ to treat 3 times faster than other HIFU devices, as a wider area can be treated at once.
